

Date: 1/11

Wednesday Challenge Form

Group Members: Michael P & Shaunt

Problem Statement: Cut out a 1x1foot square out of cardboard using a box cutter. Closest to 1x1 foot wins(90 degree corners also)

Approach: Dr. Neat said that Shaunt was to cut out the square but that didn't mean that I count coach or draw the line as close as I could to help get it close to 1 foot as possible

Solution: Connor's team won because it came down to who had the straightest line.

Lessons Learned: Use a stronger straight edge that a piece of printer paper to get better lines and corners.
