

Date:5/3

Wednesday Challenge Form

Group Members: Jacob Cole Elizabeth

Problem Statement: create a paper airplane out of only paper and make it go the longest distance.

Approach: Jacob and I made 2 designs that we had but we turned in the wrong one because the better design was to crumple up a paper ball and chuck it. It went the farthest but it was the wrong design and therefore we were disqualified.

Solution: The paper ball worked but it was the wrong design and therefore we were DQed

Lessons Learned: Paper balls are the best paper airplane because of the concentrated mass and small volume
