

Wednesday Challenge Form

Group Members: half the class-Logan

Problem Statement: We have to use 6, 2ish foot pieces of pipe to let a marble go 20 feet and put a marble into a bucket. While the marble is on the pipe the pipe cannot move.

Approach: Since every person had to participate, we had it set up so that one the marble left the pipe you ran to the person in the back of the line and gave it to them so that they could line up and receive the marble.

Solution: our plan worked and we won. Although we dropped to marble 6-7 times.

Lessons Learned: Teamwork is key in solving any problem.
