

Wednesday Challenge Form

Group Members: Tyler, sako, ethan

Problem Statement: in three sentences describe a device that can tell the difference between a cat and a dog.

Approach: our device would count the teeth cavities of the animal and then display the results on a series of LEDs. Cats have 30 teeth and dogs have 42 teeth.

Solution: TBD

Lessons Learned: we could have come up with a better solution to it like something more practical or something more distinct.
