

Wednesday Challenge Form

Group Members: Logan, Austin, Neilesh

Problem Statement: estimate how many candicorns it takes to fill a 8.5 x 11 piece of paper.

Approach: We measured how big a candicorn is then we divided the area by the paper and got 499. Logan and Neilesh said they got 579 $\frac{2}{3}$ but I got 499. So we averaged it to 560.

Solution: The answer was 499 and we lost to 2 other teams.

Lessons Learned: Estimation skills can lead you to success.
