

Wednesday Challenge Form

Group Members:Aaron, Sako, Michael P

Problem Statement: Create a “vehicle” out of 3 x3 sticky noted that can go down the ramp.

Approach: We went with the spiral design because the center of mass was off center making it go as long as the ramp is there. But it didn't work because after 9 feet one of the sticky noted broke off and it swerved to the right.

Solution: We came in second place behind the veterans.

Lessons Learned: Always make sure the sticky notes don't have dirt on them so that they don't fall off.
